

DesignTech Systems partners with Integrity Tool and Mold Inc

DesignTech Systems has recently signed a joint venture with Integrity Tool and Mold Inc. According to this partnership, DesignTech will hold 45% stake, whereas 55% will be owned by Integrity Tool and Mold Inc.

Speaking on the partnership, Scott Allen, GM, Integrity Tool and Mold Inc, stated, "This partnership will be an important step towards expanding our reach beyond American subcontinent." He further adds, "The joint venture has started operations with a small team, trained in Integrity Canada to meet ITM global mould design standards, and we anticipate a multifold growth in the team size in the coming years. Geographically distributed work force will help us address our customers' requirements faster and we will be able to hit the market early. With this, we will be able to spread our operations further to start catering to a larger market with a confidence of a bigger engine, powering this growth at the backend."

DesignTech Integrity Tool and Mold Inc plan to expand their operations in India

According to Atul Marwaha, Sr VP–International Business at DesignTech Systems, the company had been doing business with Integrity

since late 2011 and they started with catering to their requirements on case to case basis. "Under this partnership, we will not only be working for ITM global engineering requirements, but we also plan to use this as a launch-pad for expanding mould design and manufacturing services in Asia. Integrity is renowned to provide highest quality, scale, and value to its customers and has the capacity to develop highly specialised tooling that can range from 200 to 3000 ton presses," he said.

The venture plans to expand their operations in India by initially setting up a large engineering team to cater to various mould design and mould engineering aspects for ITM global clients.
